

Import Data Using Transform Maps (Spreadsheet)

1. Brainstorming & Ideation

Project idea, problem statement, objectives and proposed solution

Problem Statement

Manual entry of spreadsheet records into the target system can be time-consuming and may lead to data-entry errors. The project proposes importing spreadsheet data using an Import Set and Transform Map so that source data can be loaded, mapped, transformed and inserted into the required target table.

Project Idea

The main idea is to take structured data from a spreadsheet, upload it through the import process, create field mappings with a Transform Map, apply required transformations, and transfer the cleaned data into the target table.

Objectives

1. Import spreadsheet data efficiently. 2. Map source fields to target fields. 3. Transform data when required. 4. Reduce manual data entry. 5. Validate imported records and handle errors.

Expected Outcome

A working import workflow in which spreadsheet records are successfully loaded into the target table with correct field mapping, transformation and validation.

Project: Import Data Using Transform Maps (Spreadsheet)
